To whom it may concern

I work for the Department of Education and Children's Services (DECS) in South Australia. I have worked with Lloyd Godson for the past three years in a professional capacity on a variety of projects.

DECS agreed to work collaboratively with Lloyd to use DECS web based software (Centra™) as a means to deliver live virtual classroom lessons from underwater during the BIOSUB project. This project was so unique in its scope and technical challenges and offered a range of learning opportunities for students that were unlikely to be repeated.

This partnership began with regular planning sessions via Centra and Lloyds name and the pending BIOSUB project quickly became known across the educational community in South Australia and beyond.

Lloyd then agreed to be a guest speaker at a number of state and national presentations, conferences, international delegations and school events where he was able to clearly articulate his project aims, the benefits to student learning programs and how to re-engage students with a passion for science.

These presentations were targeted at a range of audiences which included primary and secondary students, tertiary and corporate staff as well as members from the business community.

Lloyd was always able to work to his target audience, to engage and interact with them and quickly demonstrate a warm rapport with them.

The BIOSUB project was the most recent of these and these daily Centra webcast sessions were clear examples of his ability to work confidently and passionately with his audience during a very physically testing environment underwater.

I look forward to working collaboratively with Lloyd in the near future and would have no hesitation in affirming Lloyds ability to engage any audience in a lively and interactive presentation.

Regards
