

LETTER OF RECOMMENDATION

Name of applicant: Lloyd Godson

Name of referee: Dennis Chamberland

**Title of referee: Bioengineer, MS., National Aeronautics and Space Administration,
John F. Kennedy Space Center**

I have personally known Lloyd Godson for three years. During that time, he has taken on an internationally and scientifically significant privately funded scientific and engineering research project known as "Biosub" for which I was privileged to act as a technical consultant. I was personally amazed at Lloyd's personal energy, determination and scientific expertise that he brought to bear on this significant one-of-a-kind investigation. Single-handedly, Mr. Godson created the first bio-regenerative life support system ever to be used in the undersea environment. He was able to enlist many international partners including NASA in this endeavor and was capable of coordinating and conducting many varied levels of research and a robust educational outreach program simultaneously. If that was not enough, Mr. Godson in parallel kept the international media informed of his progress with daily interviews and through his investigation became an Australian national hero, winning the Australian Geographic Society's prestigious Adventurer of the Year Award for 2007. The award was well earned and signified the dramatic scope and accomplishment of Lloyd Godson and his truly remarkable abilities, passion and capacity to invent, build, complete and communicate his scientific genius to his country and the world at large. I most strongly recommend Mr. Lloyd Godson to this endeavor and envy any academic program that is able to sign him on as a member. Please feel free to call upon me at any time if I may be of more service to your exceptional institution of higher learning.
